DETAILED ACTION

Drawings

1. Figures 9 and 10 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Collette et al. (US 5,520,877).
3. In regards to claim 2 Collette et al. teach a method for a biaxially orientated bottle shaped container (column 6 lines 13-16). Collette et al. teach an initial step of blow molding the preform to a size larger than the final product size, while the preform is

stretched by a stretching rod (figure 9 and column 9 lines 53-58). Collette et al. then teach the stretch rod be released by an internal spring, therefore making the bottom unrestrained before heat shrinking the intermediate product (figure 11 and column 10 lines 29-54). Collette et al. then perform a second step of blow molding to obtain the final project (column 10 lines 54-56).

Fig. 11

4. In regards to claim 1, while Collette et al. do not specifically mention X-ray diffraction values, it would be inherent that an article made of the same material in the same way would have the same properties.

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thornton*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1 and 2 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 3 of U.S. Patent No. 6,627,279. Although the conflicting claims are not identical they are not patentably distinct from each other because the instant application teaches a method for forming a blow molded container, which consists of a primary blow mold step, followed by heat shrinking, and concluded with a final blow molding step. The conflicting patent teaches the same method with the additional step of heat setting the bottom and part of the barrel of the container. The steps and materials of the patented claims encompass that of the presently claimed inventions. As the material is the same with both inventions the claimed physical limitations would also be present.
